

BRUNS

Experimenta Das Science Center

Experimenta has reopened as Germany's most innovative and largest science centre. Under the motto 'discover, experience, recognize', makes Experimenta science and technology understandable for young and old. One thing comes first and that is: try it yourself. According to Experimenta, one can only learn something by making connections in a playful way and discovering new things from one's own interests. The new building consists of four floors of which the first three are arranged in different themes and the fourth floor as children's zone. Bruns, in cooperation with NorthernLight and YiPP, has fully developed two of the three floors, namely 'StoffWechsel' and 'WeltBlick'.

Location

Heilbronn, Germany

Surface area

1800m²

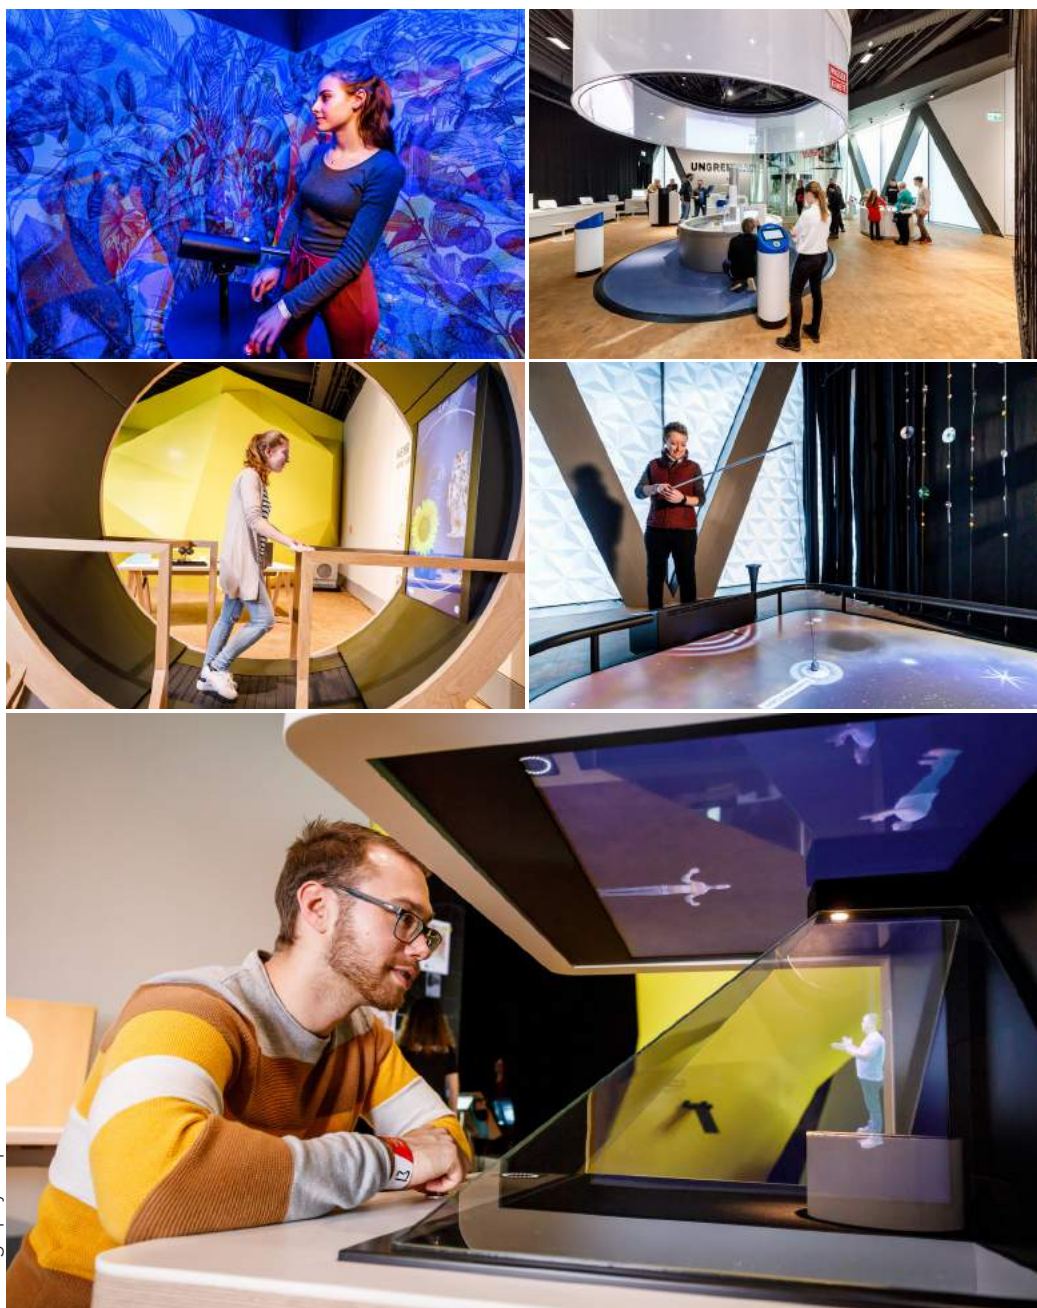

Experimenta Das Science Center

The project is, in a period of three years, through Bruns as main contractor managed. This means that Bruns has taken the lead in the development process consisting of: designing, engineering and realisation.

The goal that Bruns wanted to reach with NorthernLight and Yipp, was to make the dream come true of the ambitious client. To become the most innovative and largest science centre of Germany, required more than a standard story. Due to the major involvement of the client and creative influences of the whole team are the storylines 'StoffWechsel' and 'WeltBlick' created.

The result of an intensive cooperation was an open communication, in which space was created for handling a unique process-based model: Bruns was able to ensure that every exhibit went through the production process step by step, so that the exhibits could already be delivered in intermediate phases. The open communication also ensured that every team member felt free to share his or her idea in a respectful way. This resulted in two creative richly filled floors. Bruns has translated the creativity in at least 110 challenging technical exhibits of high quality. Examples of these technical exhibits are: 'Playing with the weather', 'Angling to the stars', 'Walking through a world of microorganism', 'Take it against the wind' and 'Let your eyes be fooled by colour'.
