

Museumpark VONK in Eindhoven takes visitors on a journey through 10,000 years of regional history. The museum park was created through the further development of the preHistorisch Dorp and the collection of Eindhoven Museum. Its story shows how the region evolved from its earliest inhabitants to the innovative Brainport region of today. Visitors discover stories, objects and historic locations that together bring the history of Eindhoven and its surroundings to life.

In the new museum building, visitors discover this history in an active and sensory way. Under the motto 'Get hands-on', VONK invites visitors not only to look, but also to experience, explore and immerse themselves in the story. Following the introductory show, stories, objects and interactive elements come together across a range of experiential worlds. Curiosity, wonder and participation are at the heart of the visitor experience.

Service & Maintenance

Project Director

John Bootsman

Bruns was responsible for the technical development, production and realization of the interior fit-out of three experiential worlds within Museumpark VONK. In Travel Through Time, the history of the region is told through objects, stories and presentations. The Cabinet of Stories offers space for special collection objects and additional stories. In the Workshop of Imagination, interaction takes centre stage and visitors are invited to discover, explore and participate for themselves. For these spaces, Bruns realized presentation furniture, display cases, exhibits and interactive interior elements.

In close collaboration with Museumpark VONK, Ata Tech and Create.eu, the concept by Tinker Imagineers was further developed into a coherent visitor experience. Through a combination of technical expertise, craftsmanship and a flexible project approach, the team successfully connected design, content and interaction. The result is a high-quality museum environment in which visitors can actively discover, experience and explore the history of the region.
