

Technopolis in Mechelen (BE) is a place where visitors can discover all kinds of things about science and technology in a fun way. You experiment yourself, how science and technology are part of everyday life.

Puur represents the renewal of the main expo with pure science. An exhibition area where interactive exhibits highlight basic science principles.

Children are full of questions about how daily activities work. At Technopolis, everything becomes clear by itself!

Mechelen, Belgium

Bruns was main contractor of the design and build project Technopolis Puur. Together with design agency Designwolf, creative technology partner CREATE.eu and Technopolis itself, 45 new exhibits have been realised. Exhibits about classic topics from various themes.

Questions such as 'Can you draw with light?'. 'How do you cycle with square wheels?', 'How do you race a cheetah?' and 'Can you stand in a bubble?', are all addressed.

Within Bruns, we now have a lot of experience with these classics. In this project, as many as 24 exhibits were developed that we have not realised before. In addition to this challenge, extra care was taken to make the exhibits as robust as possible for intensive use.

The main exhibition, Puur, is a meaningful exhibition where a wide variety of phenomena come to life. From physics to chemistry, biology, geography, mathematics, space, engineering and technology.
