

BRUNS

Unsichtbare Welten

In the Reiss Engelhorn Museen in Mannheim, visitors go on a journey in the temporary exhibition 'Unsichtbare Welten'. A practical exhibition for children and families, which can be visited from 22.05.2022 to 30.07.2023.

Our eyes are very functional and we see a lot of the world, but there also an incredible amount that we cannot see with our unaided eye. We do not see everything from nature, space, our body and even our thoughts. In the temporary exhibition 'Unsichtbare Welten', you can get closer to major themes such as "Origin", "Life", "Waves", "Thoughts", "Mystery", "Earth", "Brain" and "Cosmos" via eight different island of discovery. An interactive museum experience with exciting and varied activity stations.

Bruns was responsible for the realization of eight worlds together with design agency NorthernLight, digital media studio Yipp and lighting specialist Ata Tech. The pavilions were realised as literal islands, almost floating in space. From the outside, each pavilion has a characteristic colour that refers to the different techniques used to make the invisible visible. Techniques such as heat camera images, black light, liquids and optical illusions supported by easy-to-understand infographics enhance the visitor's experience.

Each pavilion stands for new discoveries. For example, visitors learn how a bat finds its way in complete darkness. They discover how the human brain works. They also see tiny particles vanish into air before their eyes and get an idea of what fossilised creatures looked like in the past. During the visit to 'Unsichtbare Welten', children become researchers and are given the opportunity to try out what nature and man have developed and invented to make the invisible visible.

The exhibition enables visitors to look beyond what they actually see!
