

BRUNS

Henan Science Centre

The Henan Science Centre has renewed an entire zone with exhibits. This zone focuses on interactivity, so Hands-on! Visitors will be challenging to push buttons, track movements and discover how various technologies work. The exhibits have just one purpose and that is to let visitors playfully solve a variety of challenges. In these, skills are tested in which technological and science phonemes are explained in a educative way.

Beijing, China

Location

Beijing, China

Bruns has delivered eleven exhibits for the renewed zone, four of which were complete with furniture and seven only the technology and hardware. The engineers developed the techniques and clarified the overview of the work. Together with Kiss The Frog and Ata Tech, Bruns brought together the multimedia and technology, with the furniture also manufactured for four of the eleven exhibits. Within the development of the techniques to be applied, craftsmanship was high stakes to realise everything within the budget. For instance, the exhibit 'Magic Flap' was adapted from initially being a technical/mechanical setup to an electronically controlled setup.

What is special to this project is that Bruns has developed, produced and assembled the exhibits in the workplace, but did not carry out the installation phase on site. After transportation, the Henan Science Centre assembled the entire area itself and the project was delivered as required.
