

End of 2015, we delivered our first science project in China. With a design of Archimedes Exhibitions GmbH, we have developed, produced and installed about 30 interactive exhibits for Liaoning Science and Technology Museum in Shenyang, China.

The exhibition gallery 'exploration and discovery' is divided into six zones, each with its own theme/topic. Liaoning Science and Technology Museum, an impressive large science museum with an unprecedented number of exhibits, is specially designed for the Chinese children and teenagers. The exhibits developed by us are characterized by the extreme technical complexity and large scale of the exhibits. The exhibits are arranged in zones with the themes as 'Colorful Body World', gravitym motion, electricity, magnetism', Math Magic and 'Exquisite Microscopic World'.
